EXPERIENCE

HP

Spain

Technical Lead AI

Apr 2026– Current

- Leading a team of 6 AI Engineers in the expansion of new capabilities & use-cases for HP Nio across other domains/business units (Large Format, 3D, Sales, etc.).

Senior AI Engineer

Jan 2025– Apr 2026

- Working on the core development of HP Nio, an AI-powered chatbot for delivering real-time insights and predictive analytics to optimizing your processes intelligently.

NOVARTIS

Basel/Spain

Senior Data Scientist

Jun 2024– Jan 2025

- Research scientist working in the implementation of Large Language Models (LLM) architectures for the *in silico* perturbation of gene expression, with main interest in metabolic routes involving CD40 pathway. Part of the Immunology Group (IMM).

Spain

Senior Data Scientist

Jun 2023– Jun 2024

- Main technical contributor of the aspiration product, that aims to close the gap between AI predictions & what Business profiles expect through building an analogues-based approach that learns from the sales-performance of similar products in the same area of action in the past to quantify future performance.

Expert Data Scientist

Jun 2021 –Jun 2023

- Led & constructed an approach to model the impact on the sales due to a transition of the lifecycle moment of a product.
- Led numerous workshops and presentations for business stakeholders from the *UK, Germany, Spain, France, Italy, the US, Canada, Japan and South American* countries
- Worked with other DS & SWE in the entire industrialization of the Sales Forecasting product until achieving a fully automatized workflow.
- Technical Lead of the Novartis Datathon 2022, an international competition with more than 50 different teams.

Trainee Data Scientist

Jun 2020 –Aug 2021

- Contributed to the development of the baseline component as part of the Sales Forecasting engine, aiming to perform sales forecasting of the next 3 years for more than 3000 country-drug products.

IRB Barcelona

Spain

Computational Biologist

Sep 2019 – Jun 2021

- Developed a methodology to estimate RNA tertiary structure based on Monte Carlo simulations & a custom-made scoring function to be minimized. The function resulted from a two-equally weighted components: the energetic field-force of the overall structure resulted from an ML approach & the pseudo-torsional angles quality evaluated through a Bayesian-based system.

BIOP-AI

London

Co-Founder & Data Scientist

Jan 2019 -Dec 2019

- Co-founder & leader of a small start-up developing a computer vision approach for the early-stage detection of malignant skin-cancer forms through smartphone pictures.
- Contributed with the technical team on the end-to-end software solution including core algorithm development, app prototyping & model refinement.

EDUCATION

UNIVERSITAT POLITÈCNICA DE CATALUNYA

Postgraduate course in Artificial Intelligence with Deep Learning. Score 9 /10

Spain
Sep 2021 – Sep 2023

- Course on Artificial Intelligence and Deep Learning. Developed a final project related with the

UNIVERSITAT OBERTA DE CATALUNYA

Master of Bioinformatics & Biostatistics. Score 8,5/10

Spain
Sep 2021 – Sep 2023

- Final Master Thesis scored 9,3/10. Enhancement of EpiFRlenDs, an algorithm used for the hotspot detection of any epidemiological disease, with special focus on Malaria.

UNIVERSITAT DE BARCELONA

Bachelor of Biochemistry. Score 8.3/10

Barcelona, Spain
Sep 2017 – Jun 2021

- Final Bachelor Thesis scored 9,2 out of 10. Developed & implemented a tool used to estimate RNA tertiary structure.

ADDITIONAL

- Proficient in advanced analytics tools: Python, R, Excel, PowerBI
- AWS Cloud Practitioner Certification
- Usage of Python & R to built visualization reports with architectures like Streamlit, Flask or Rshiny.
- Performed +20 certifications related with MLOps, GenAI, NLP, LLM, ML from Coursera, Udemy & DeepLearning AI.
- Knowledgeable in AWS environment (Lambda, S3, Snowflake). +2 years of experience.
- High-impact communication certificate issued by Dale Carnegie.
- Spanish citizen; fluent in Spanish, English (C1).
